Voluntary Results Feedback Form

➤ I am an examiner in Workgroup: Example: 3620 (optional)

➤ Relevant prior art **found**, search results used as follows:

- ☐ 102 rejection
- ☐ 103 rejection
- ☐ Cited as being of interest.
- ☐ Helped examiner better understand the invention.
- ☐ Helped examiner better understand the state of the art in their technology.

Types of relevant prior art found:

- ☐ Foreign Patent(s)
- ☐ Non-Patent Literature
(journal articles, conference proceedings, new product announcements etc.)

➤ Relevant prior art **not found**:

- ☐ Results verified the lack of relevant prior art (helped determine patentability).
- ☐ Results were not useful in determining patentability or understanding the invention.

NETWORK SYSTEM, ADVERTISEMENT INFORMATION RECEPTION/ INSERTION PROCESSING METHOD AND RECORDING MEDIUM WITH THE METHOD RECORDED THEREON

Pub. No.: 2001-344662 [JP 2001344662 A]

Published: December 14, 2001 (20011214)

Inventor: MINOWA MASAHIRO

Applicant: SEIKO EPSON CORP

Application No.: 2001-091338 [JP 200191338]

Filed: March 27, 2001 (20010327)

Priority: 2000-087280 [JP 200087280], JP (Japan), March 27, 2000 (20000327)

ABSTRACT

...recruiting, something to look for, announcement, cooperation request, etc., into a receipt issued from a **POS** terminal, a voucher issued from a kiosk terminal, a reception number table, etc., issued from... ..payment information of a cost for advertisement information are transmitted to a receiving and distributing **server** system for receiving and distributing the application advertising information and a **server** system calculates charging information in accordance with the received advertising information to transmit it to a client PC through the Internet. The **server** system confirms the completion of a paying procedure and then transmits the advertising information to a center computer, which distributes the received advertising information to plural store **POS** systems. Each of the **POS** systems receiving the advertising information prints the advertising information together with the **adjustment** information of purchased merchandise to the **receipt** to be issued in the **adjustment** processing of a customer.

-------------------------------------	--

Financial transaction verification system, has processing server under control of financial services provider, where transaction processing client, server and telecommunications client are connected to telecommunications networks

Alerting Abstract ...NOVELTY - The system has a transaction processing **server** under a control of a financial services provider. A telecommunications client is provided under the control of a transaction initiator. A transaction processing client, the **server** and the telecommunications client all are connected to a set of telecommunications networks. The **server** is programmed to use the data pertaining to the initiator and the client previously stored...
...ADVANTAGE - The transaction processing client, programmable transaction processing **server** and the telecommunications client all are connected to the telecommunications networks, thus providing an authentication...

Original Publication Data by Authority

Original Abstracts:

The financial transaction verification system of this invention comprises a **POS** terminal that serves as a programmable transaction processing client, a bank **server** or **servers** that constitute a programmable transaction processing **server**; and a customer with a telephone, cell phone or other telecommunications appliance (a telecommunications client under the control of the transaction initiator). The **POS** terminal (transaction processing client) is connected to the bank **servers** (transaction processing **server**) by way of a PSTN. The telecommunications client is constituted by a customer cell phone or any other telecommunications appliance, which is connected to the bank **servers** (transaction processing **server**) by way of a GSM, GPRS or other wireless network (Wi-Fi or WiMax) or... .. programmed with a transaction authorisation code transmitted to the customer cell phone by the bank **server** by way of an SMS message. This process can be automated by programming the cell... .. to the user. A duplicate of the transaction authorisation code is stored in the bank **server** (transaction processing **server**) as the currently valid transaction authorisation code. The **POS** terminal (transaction processing client) is programmed, when in use a transaction is initiated and processed through the **POS** terminal to record transaction data, normally directly from the till of which the **POS** terminal forms a part or by way of keypad entries: In addition, the **POS** terminal is used to obtain customer account data, normally by swiping the customer's credit card through the magnetic stripe reader forming part of the **POS** terminal. The **POS** terminal (transaction processing client) transmits the recorded transaction data to the bank **server** (transaction processing **server**) by way of the PSTN to which it and the bank **server** are connected. The bank **server** (transaction processing **server**) uses the customer's bank account data to carry out the normal customer identification and available balance checks found in existing financial transaction verification systems. In addition, however, the bank **server** is programmed to formulate a transaction authorisation request to the **POS** terminal and to transmit the transaction authorisation request to the **POS** terminal by way of the PSTN. The **POS** terminal (transaction processing client) is programmed, as a precondition for the further processing of the... ..receipt of the transaction authorisation request, the entry of a transaction authorisation code into the **POS** terminal. The code that must be entered is the transaction authorisation code first programmed intoPIN to access the secure memory are of the phone and then enter into the **POS** terminal by way of the terminal keypad.

Upon entry of the code the **POS** terminal is programmed to transmit the code so entered to the bank **server** by means of the PSTN. At the bank, the bank **server** (transaction processing **server**) compares the code transmitted to it by the **POS** terminal to the currently valid transaction authorisation code stored in the bank **server**. If a correct transaction authorisation code is received, the bank **server** issues a transaction processing notification to the **POS** terminal by way of the PSTN authorising the transaction to proceed. If an incorrect code is entered, the **transaction is aborted** and the bank **server** transmits a failed **transaction** notification to the **POS** terminal. At the same time the bank **server** transmits a new transaction authorisation code to the customer cell phone (telecommunications client) by way... GSM network and stores a duplicate of the new transaction authorisation code in the bank **server** as the currently valid transaction authorisation code. By the addition of a smart card or... transaction verification system of the invention can be adapted to accommodate situations in which the **POS** terminal (transaction processing client) fails, in use, to communicate with the bank **server** (transaction processing **server**), such as when the telephone lines of the PSTN are down or the bank **server** is down. The portable programmable logic device of preference is a smart card... Le systeme de verification de transactions financieres de l'invention comprend un terminal **POS** qui sert de client de traitement de transactions programmable, un serveur ou des serveurs bancaires... telecommunications (un client de telecommunications sous le controle de l'initiateur de transactions). Le terminal **POS** (client de traitement ...de traitement de transactions) en tant que code d'autorisation de transaction valide. Le terminal **POS** (client de traitement de transactions) est programme, lorsqu'il est en cours d'utilisation, une transaction est initiee et traitee par le terminal **POS** afin d'enregistrer des donnees de transaction, normalement directement a partir du plateau dont le terminal **POS** fait partie ou au moyen d'entrees clavier. De plus, le terminal **POS** est utilise afin d'obtenir des donnees de compte client, normalement par glissement de la carte de credit du client dans le lecteur de bande magnetique faisant partie du terminal **POS**. Le terminal **POS** (client de traitement de transactions) transmet les donnees de transaction enregistrees au serveur bancaire (serveur... bancaire est programme afin de formuler une demande d'autorisation de transaction aupres du terminal **POS** et pour transmettre la demande d'autorisation de transaction au terminal **POS** au moyen du RTPC. Le terminal **POS** (client de traitement de transactions) est programme, condition prealable au traitement ulterieur de la transaction... autorisation de transaction, l'entree d'un code d'autorisation de transaction dans le terminal **POS**. Le code qui doit etre entre est le code d'autorisation de transaction programme en... acceder a la zone de memoire securisee du telephone puis pour entrer dans le terminal **POS** au moyen du clavier du terminal. Lors de l'entree du code, le terminal **POS** est programme pour transmettre le code ainsi entre au serveur bancaire au moyen du RTPC... systeme de traitement de transactions) compare le code qui lui est transmis par le terminal **POS** au code d'autorisation de transaction valide stocke dans le serveur bancaire. Si un code... est reçu, le serveur bancaire emit une notification de traitement de transaction vers le terminal **POS** au moyen du RTPC autorisant la poursuite de la transaction. Si un code incorrect est... transaction est avortee et le serveur bancaire transmet une notification de transaction echouee au terminal **POS**. Dans le meme temps, le serveur bancaire transmet un nouveau code d'autorisation de transaction... l'invention peut etre concu pour s'adapter a des situations dans lesquelles le terminal **POS** (client de traitement de transactions) ne parvient pas, lors de l'utilisation, a communiquer avec...

Point-of-sales system for retail store, has store server for transmitting transaction cancel instruction from other point-of-sales terminal to point-of-sales terminal performing transaction

Original Titles:

POS SYSTEM... ..POS system

Alerting Abstract ...NOVELTY - Point-of-sales (POS) terminal executes **transaction cancel** instruction received from the store **server** to **cancel** a **transaction** performed by the POS terminal. Store **server** transmits the **transaction cancel** instruction received from a POS terminal other than the POS terminal performing transaction to the POS terminal performing transaction.

...ADVANTAGE - Allows correction or cancellation of the transactions from any POS terminal other than the POS terminal performing **transaction**. Allows **transaction** data to be **canceled** or corrected by correcting only necessary product data items without having to **cancel** the entire data concerning that **transaction**. Eliminates the need to re-enter the corrected transaction data after the cancellation of the... ..DESCRIPTION OF DRAWINGS - The figure shows the block diagram of the configuration of the POS terminal.

Original Publication Data by Authority

Original Abstracts:

The POS system of the **present** invention comprises at least one store server and a plurality of POS terminals. Each POS **terminal** includes means for transmitting transaction data to the store server as a transaction **occurs** at the POS terminal, means for **querying** the store server for transaction data **relating** to a transaction that occurred at another POS terminal, means for **instructing** the store server to cancel the **transaction** that **occurred** at **that** other POS terminal, and means for executing a transaction cancel instruction received **from the** store server to cancel a **transaction** that **occurred** at the POS terminal, and the store server includes means for **receiving** a transaction cancel instruction from a POS terminal other than the POS terminal at which the transaction occurred, and for **transferring** the transaction cancel instruction to the POS terminal at which the transaction occurred. With this

configuration, the POS system allows any **transaction**, including a sales transaction, originally registered at any POS terminal, to be **canceled** through any other POS terminal in the **POS** system. It is **also** possible to correct transaction data without canceling **the** entire transaction. As a result, **transaction** data can be **readily** corrected when an operator's input error is found or when a purchased product is returned by a customer, and an easy-to-operate POS system can thus be provided.

Claims:

1. A POS system comprising at least one store server and a plurality of POS terminals as clients to said store server, wherein each of said plurality of POS terminals includes means for transmitting **transaction** data to said store server as a transaction occurs at said each POS terminal, means for querying said store server for transaction data relating to a transaction that occurred at another POS terminal, means for instructing said store server to cancel the transaction that occurred at said other POS terminal, and means for executing a transaction cancel instruction received from said store server to cancel a transaction that occurred at said each POS terminal, and said store server includes means for receiving a transaction cancel instruction from a POS terminal other than the POS terminal at which said transaction occurred, and for transferring said transaction cancel instruction to said POS terminal at which said transaction occurred.

POS SYSTEM, POS SERVER, SALES MANAGEMENT METHOD AND RECORDING MEDIUM

ABSTRACT

PROBLEM TO BE SOLVED: To provide a POS server, capable of immediately responding to a request from a store terminal.

SOLUTION: This POS server 100 for administrating plural store terminals arranged in plural stores is provided with a first and a second administration devices for housing the business information, showing that a merchandise business is performed in a first store terminal 300a among the plural store terminals, while receiving the business information from the first store terminal 300a and for informing the first store terminal that the business information has been received.

DISTRIBUTION PROCESSING SYSTEM AND CLIENT

ABSTRACT

...where trouble such as down in a whole system does not occur even when a server goes down without using server multiplexing technique and also to provide a client to be used for the system.

SOLUTION: The system is provided with a server function for performing a processing in fat clients 10a and 11a among a plurality of POS clients 10a, 10b, 10c, ... and 11a, 11b, 11c, ... which are serially connected to constitute the system in accordance with the requests of thin clients 10b, 10c,..., 11b, 11c, ...and for outputting the processing result to the thin clients which make the requests. They are independently operated.

ABSTRACT

PROBLEM TO BE SOLVED: To actualize a backup function for a **server computer** trouble without letting a user feel the burden of cost by requesting a controller to perform various operations if a **client computer** confirms that a fault has occurred to a **server computer**.

SOLUTION: A personal **computer 6** has a function for determining whether or not a fault has occurred to a store **computer 5**. When it is confirmed that there is no fault, requests to perform various operations are sent to the store **computer 5** through a communication line 4, but if fault occurrence is confirmed, a **POS** controller 2 is requested directly to perform the various operations through the communication line 4. Thus, even if the store **computer 5** is shut down owing to some fault, the personal **computer 6** is able to send the execution **request** commands for the **various** operations directly to the **POS** controller 2, which performs the **various** operations, thereby minimizing the influence on the store.

Method for offering advertisement and drawing lottery by using web pos system

Alerting Abstract ...NOVELTY - An advertisement service and lottery drawing method is provided to distribute multi-functional web POS(Point Of Sales) systems to stores and to enable the stores to offer advertisement or ...

DESCRIPTION - The method comprises several steps. A **client** accesses an IO management module of a web **server** by using a web POS system (ST11). The web **server** certifies the accessing **client**, offers advertisement stored at a database (ST13), and records sale and buying data after recognizing a store ID if sale or purchase data is input (ST14-ST16). The web **server** receives an instant type gift event participation **request** from a purchaser at a point of a sale (ST17), and transmits a gift event result to the purchaser (ST23, ST24). The web **server** also receives a lottery event participation **request** from the purchaser, and transmits the lottery result to the purchaser(ST18-ST22).

Point-of-sales system for retail store, has store server for transmitting transaction cancel instruction from other point-of-sales terminal to point-of-sales terminal performing transaction

Original Titles:

POS SYSTEM... ..POS system

Alerting Abstract ...NOVELTY - Point-of-sales (POS) terminal executes transaction cancel instruction received from the store server to cancel a transaction performed by the POS terminal. Store server transmits the transaction cancel instruction received from a POS terminal other than the POS terminal performing transaction to the POS terminal performing transaction.

DESCRIPTION - An INDEPENDENT CLAIM is included for point-of-sales terminal.

... ..**ADVANTAGE** - Allows correction or cancellation of the transactions from any POS terminal other than the POS terminal performing transaction. Allows transaction data to be canceled or corrected by correcting only necessary product... ..**DESCRIPTION OF DRAWINGS** - The figure shows the block diagram of the configuration of the POS terminal.

Title Terms .../Index Terms/Additional Words: TERMINAL;

Original Publication Data by Authority

Original Abstracts:

The POS system of the present invention comprises at least one store server and a plurality of POS terminals. Each POS terminal includes means for transmitting transaction data to the store server as a transaction occurs at the POS terminal, means for querying the store server for transaction data relating to a transaction that occurred at

another POS terminal, means for **instructing the** store server to cancel the **transaction** that occurred at that other POS terminal, and means for **executing** a transaction cancel instruction received from the store server to cancel a **transaction** that occurred at the POS terminal, and the **store server** includes means for **receiving** a transaction cancel instruction from a POS terminal other than **the POS** terminal at which **the transaction** occurred, and for transferring the transaction cancel instruction to the POS terminal at which **the transaction** occurred. With this configuration, the POS system allows any **transaction**, including a sales transaction, originally registered at any POS terminal, to be **canceled through** any other POS terminal in the **POS system**. It is **also** possible to correct transaction data without canceling the entire transaction. As a result, transaction data... .. product is returned by a customer, and an easy-to-operate POS system can thus **be** provided.

Claims:

1. A POS system comprising at **least** one store server and a plurality of POS terminals as clients to said store server, wherein each of said plurality of POS terminals includes means for transmitting **transaction data** to said store server as a transaction occurs at said each POS terminal, means for querying said **store server** for transaction **data** relating to a transaction that occurred at another POS terminal, means for instructing said **store server** to cancel the transaction that **occurred** at said other POS terminal, and means for executing a **transaction cancel** instruction received from said store server to cancel a transaction that **occurred** at said each POS terminal, and said store server **includes means** for receiving a transaction cancel **instruction** from a POS terminal other than the POS terminal at **which said** transaction occurred, and **for transferring** said transaction cancel instruction to said POS terminal at which said transaction occurred.

Point-of-sale information management server for shops, outputs receiving notification of goods transaction information to store terminal

Original Titles:

POS-SYSTEM, POS-SERVER, SHOP-ENDGERAT, VERKAUFSVERWALTUNGSVERFAHREN UND AUFZEICHNUNGSMEDIUM... ..POS SYSTEM, POS SERVER, SHOP TERMINAL, SALES MANAGING METHOD, AND RECORDING MEDIUM... ..SYSTEME ET SERVEUR POS, TERMINAL DE MAGASIN, PROCEDE DE GESTION DES VENTES ET SUPPORT D'ENREGISTREMENT... ..POS SYSTEM, POS SERVER, SALES MANAGEMENT METHOD AND RECORDING MEDIUM... ..Pos system, pos server, shop terminal, sales managing method, and recording medium... ..POS SYSTEM, POS SERVER, SHOP TERMINAL, SALES MANAGING METHOD, AND RECORDING MEDIUM... ..SYSTEME ET SERVEUR POS, TERMINAL DE MAGASIN, PROCEDE DE GESTION DES VENTES ET SUPPORT D'ENREGISTREMENT

Alerting Abstract ...NOVELTY - The management devices (210a,210b) respectively receive the goods transaction information from a store **terminal** (300a) and outputs receiving notification to the store **terminal**.

... Point-of-sales (POS) system; **Selling** management method; and Recorded medium storing selling management program...

... ADVANTAGE - Demand from the store terminal is immediately responded by the POS server.

... The figure shows the block diagram of POS information management server. (Drawing includes non-English language text).

Title Terms .../Index Terms/Additional Words: **TERMINAL**

Original Publication Data by Authority

Original Abstracts:

The present invention relates to provide a POS server which responds **instantly** to the request from local terminals. **The POS server controls a plurality of local terminals arranged in a plurality of stores**, having a first and second control apparatus which receive and store dealing information, from the first local terminal 300a respectively, which **shows** that products dealing was conducted in the first local terminal 300a among the **plurality** of local terminals, and notifies that **the** dealing information was received, to the first local terminal.

... .. present invention relates to provide a POS server which responds instantly to the request from **local terminals**. The POS server controls a **plurality** of local **terminals** arranged **in a plurality of stores**, having a **first** and second control apparatus which receive and store dealing information, from the first local terminal **300a** respectively, which shows that products dealing was **conducted** in the first local terminal **300a** among the plurality of local terminals, and notifies that the dealing information **was** received, to the first local terminal.

... .. a request of a shop terminal and for managing the transactions of a plurality of **shop terminals** installed at a plurality of shops. The POS **server** (100) comprises first **and** second managing devices, each of which receives transaction information representing **that** commodity transaction has **been** made at a **first one** (300a) of the shop terminals from the first shop terminal (300a), stores the transaction information therein, and notifies the first shop terminal that it has received the transaction **information**.

... .. de gerer les transactions d'une pluralite de terminaux de magasin installes au niveau d'une pluralite de magasins. Ledit serveur POS (100) **comprend** un **premier** et un second dispositif de gestion, chacun d'eux recevant des informations de transaction representant une transaction de denree **effectuee** au niveau d'un **premier** (300a) terminal de magasin a partir du premier terminal de magasin (300a), stocke les informations de transaction et notifie au premier terminal de magasin qu'il a recu les informations **de** transaction.

Claims:

A POS server **controlling** a plurality of **local** terminals arranged **at a plurality of stores**, said POS server **comprising: a first and a second control apparatus**, each of which receives and stores dealing information that products dealing has been made at a first local terminal, from **the** first local terminal of **said** local terminals, and **notifies** the first local terminal of **receiving** said dealing information... .. **1.** A POS server controlling a plurality of local terminals **arranged at a plurality of stores**, said POS server comprising: a **first** and a second **control apparatus**, each of which receives and stores dealing information that products dealing has been made at a first local terminal, from the first local terminal of said **local** terminals, and notifies the **first** local terminal of **receiving** said dealing information.

Specification: ...terminal sub-control apparatus may store said dealing information on a local terminal which said **POS server** controls. When said transmitting unit transmits a **demand** of said dealing information received and stored from local terminals other than the local terminal concerned among said local terminals which said **POS server** controls, said transmitting unit may retransmit said **demand** by making to have not received said response from said local terminal sub-control apparatus... ...local terminals with a plurality of control apparatuses 210, when controlling a plurality of local **terminals** 300. In this way, the **POS server** 100 can response **request** from local **terminal** 300 on real time, even when there are many local terminals 300 to be controlled...Effect of the Invention

According to this invention, clearly from the above-mentioned explanation, a **POS server** can response immediately to a **demand** from a local **terminal**. Moreover, a low cost POS system can be offered.

Claims: ...second local terminal at least one from said third and fourth control apparatus.

11. The **POS server** according to claim 10, wherein, when a **demand** of information about said dealing information other than the local terminal concerned is received from... ...said plurality of local terminals, said fifth control apparatus transmits said dealing information which said **demand** shows to said local **terminal**.

12. The **POS server** according to claim 8 or 9, further comprising:

said third and fourth control apparatus which... ...fourth local terminal at least one from said third and fourth control apparatus.

13. The **POS server** according to claim 12, wherein, when a **demand** of information about said dealing information other than the local terminal concerned is received from... ...said plurality of local terminals, said fifth control apparatus transmits said dealing information which said **demand** shows to said local **terminal**.

14. The **POS server** according to any of claims 1 to 12; wherein said first control apparatus transmits a... ...local terminal sub-control apparatus stores said dealing information on the local terminal which said **POS server** controls, when said transmitting unit transmits a **demand** of said dealing information received and stored from local terminals other than the local terminal...

WARNING - ALLERGY ALERT -- UNDECLARED EGG IN GT CANNED VEGETABLE CONDENSED SOUP

CANADA NEWSWIRE

March 17, 2000

Journal Code: WCNW **Language:** English **Record Type:** FULLTEXT

Word Count: 182

OTTAWA, March 17 /CNW/ - The Canadian Food Inspection Agency (CFIA) is warning consumers allergic to egg not to consume GT brand canned vegetable condensed soup as it may contain egg not declared on the label.

The product is sold in 284 ml cans bearing a UPC 7422501929. This product was manufactured by Freddy Products Inc. of St. Hyacinthe, Quebec and distributed in the provinces of Ontario and Quebec.

Consumption of eggs can cause serious allergic reactions in individuals with an allergy to eggs. There have been no illnesses associated with this product.

Giant Tiger Stores are voluntarily removing the product from the marketplace. Consumers may return this product to the point of purchase for a refund.

The Canadian Food Inspection Agency is monitoring the effectiveness of the recall.

/For further information: Giant Tiger Stores, Don Bradley, Telephone: (613) 521-8222 (ext. 352); Canadian Food Inspection Agency (Ottawa), Mike Fleming (English), Telephone: (613) 225-2342 (ext. 3799), Pager: (613) 364-2002; Nicole Bouchard-Steeves (French), Telephone: (506) 851-7930, Pager: (613) 368-1608. For information on receiving recalls by electronic mail, visit our website at www.cfia-acia.agr.ca/ 18:15 ET

Abstract:

The busiest season for online sales is over and E-retailers now must clean up the mess: receiving, restocking, and reselling thousands of returned items and quickly issuing credits to their customers. The good news is that although returns will continue into February, early reports indicate that, so far anyway, many online merchants are doing a good job of managing the process. Returns are so complicated that many E-retailers simply outsource the whole business to specialists. This has led to a new breed of Internet sites that focus on taking in returns, paying the consumer and the merchant quickly, and disposing of the goods online through auction or discount Web sites and portals.

Text:

The busiest season for online sales is over. Like other post-holiday revelers, E-retailers now must clean up the mess: receiving, restocking, and reselling thousands of returned items and quickly issuing credits to their customers.

Getting it right is important, since 42% of online shoppers say they would buy more on the Internet if the return process were easier, according to Jupiter Media Metrix. The good news is that although returns will continue into February, early reports indicate that, so far anyway, many online merchants are doing a good job of managing the process.

Nordstrom Inc., for example, has tailored its IT systems to let customers return online purchases at its stores. The Seattle department-store chain says returns have been running smoothly, despite the fact that it expects 30% of its online apparel sales to be returned. Nordstrom has a separate IT system for its Internet and catalog operations, and employees use separate terminals to handle such returns made at stores. The data feeds into the online operation's inventory, order, and financial systems, always remaining separate from store IT systems.

The result: Sales tax isn't automatically calculated into the return, an issue because most online purchases aren't taxed, while in-store registers are programmed to add sales tax when calculating the value of a return. And the store doesn't get hit with the revenue loss. The returned products then are sent to the Cedar Rapids, Iowa, catalog/online fulfillment center or are retained by the store for resale if the inventory is needed. "This is a core part of our way of doing business," says Paul Onnen, chief technology officer at Nordstrom.com. "We've been successful in meeting customer expectations."

Today, about 58% of online retailers let customers return their purchases to brick-and-mortar stores, according to a study completed last week by Accenture,, formerly Andersen Consulting. In the process, they've addressed some pressing issues, including sales-tax policies, which part of the business takes the hit for the returns, and where the returns will be

resold. But many other E-retailers, including Toys "R" Us and Victoria's Secret, don't have IT systems in place to support in-store returns for goods purchased online. For their customers, the only option is to ship back unwanted items—a process that can be a long, costly, and frustrating experience. A few companies are trying to make it easier with outsourced solutions that track and resell goods.

About 5.6%, or \$569 million, of all goods bought online this holiday season are expected to be returned—about twice the volume as last year, according to figures from the Boston Consulting Group and Goldman Sachs. Inbound packages cost two to three times more to handle than outbound ones because employees must inspect the return, repackage it, credit the customer, and put the item back into inventory, says David Schatsky, a Jupiter analyst.

CHILLING OUT: Senior VP Hullinger can enjoy a measure of downtime after the hectic holiday shopping season because Egghead.com outsources its returns to ReturnBuy.com.

SMOOTH SAILING: Nordstrom has experienced few problems with returns of online merchandise even though it expects 30% of all online apparel sales to be returned, says CTO Onnen. Nordstrom "has been successful in meeting customers' expectations with returns," he adds.

Returns can eat up 30% to 35% of potential profits, says Gartner research director Geri Spieler. "Every time a human reads the information and rekeys it into a system, the cost goes up and so does the opportunity for error," she says. Online sites average six to eight human touchpoints in the returns process. "If you handle reverse logistics poorly, you'll find that the cost of disposing of products is going to quickly outrun any revenue that you'll ever realize," says Alex McNealey, director of operations for Bluelight.com LLC, an online retailer that's partly owned by Kmart Corp.

Still, most online retailers haven't invested enough resources in reverse logistics to make returning merchandise hassle-free, Schatsky says. "Online retailers know how important the returns process is, but they still haven't put all the resources into it that they have in other places," he says. Although 51% of online retailers implemented new fulfillment systems last year, only 29% revamped their return processes and systems, according to Jupiter. Even sites with fully electronic fulfillment processes "revert to the horse and buggy for reverse logistics and do everything manually," Gartner's Spieler says.

That helps explain why consumers will spend 35% more time returning goods bought online vs. from a catalog, according to Accenture. Too few E-retailers provide preprinted return labels or instructions, and they require that returns be pre-approved twice as often as catalog companies.

Like Nordstrom, Borders Group Inc. and Kmart have avoided such problems with flexible return policies that permit online returns at their retail outlets. Borders, 11, Ann Arbor, Mich., uses software from Brightware Inc. and Epiphany Inc. to track orders regardless of the channel or reason for the return. Because Borders' online unit doesn't operate separately, its stores don't have to worry about returns affecting their bottom line. Each store's point-of-sale system can figure out what the sales tax would have

been at the place where the item was purchased, then refund only the appropriate amount.

"Virtually anything in salable condition can be returned at any Borders store," says Mary Jean Raab, a senior VP in charge of channel convergence. Returns stay at the store for resale, and online customers get a store credit; if they return the item to the online site, they can get a refund. BlueLight.com's customers can take unwanted merchandise back to Kmart's 2,000 stores. BlueLight shares Kmart's reverse-logistics processing network, but the two units keep their data separate. Data on returns is batch-processed once a day and entered into the order-management system. There, sales are matched back to the original order data, and BlueLight issues credits or sends online checks the same day to customers who returned merchandise to the stores. BlueLight doesn't offer cash back to consumers at Kmart's cash registers, but Kmart customers are returning online purchases to the store instead of through the mail by a margin of about three to one.

Still, not all E-retailers are willing or able to handle in-store returns. Toysrus.com formed an alliance with Amazon.com Inc., giving the latter full control of logistics for the toy retailer. "They had some logistics issues to solve, and we were able to solve them," an Amazon spokesman says. Toysrus.com accepts returns only through Amazon's three-step mail-in process. Customers select a reason why they're sending something back, print out a postage-paid and bar-coded return label, and attach it to the package. If the return is because of the company's error, the retailer will absorb the cost of the return postage; if not, it will deduct the cost from the customer's refund.

Similarly, Buy.com Inc. lets customers fill out a template of information on its site, including how they paid for the item, the order number, the reason for the return, and whether they want an exchange or a credit.

Returns are so complicated that many E-retailers simply outsource the whole business to specialists. This has led to a new breed of Internet sites that focus on taking in returns, paying the consumer and the merchant quickly, and disposing of the goods online through auction or discount Web sites and portals.

Egghead.com Inc. is using an outsourced service from ReturnBuy.com Inc. In the past, Egghead returned much of its computer and electronics merchandise to the original manufacturers. "This year, there's been a trend for the big manufacturers to push product off on us with no return privileges," says senior VP of sales and operation Norm Hullinger, who adds that higher sales will result in more returns this year.

That convinced Egghead to try reverse-logistics outsourcer ReturnBuy.com. "ReturnBuy is helping us by taking the product off of our hands," Hullinger says. "It's actually generating more cents on the dollar for us, because returns are its core competency. We understand returns, but we'd rather focus our resources on selling computers and related equipment."

ReturnBuy accepts the returns, credits the customers, and resells the items, charging Egghead \$2 to \$20 per item, plus a 10% to 50% commission.

MuseumCompany.com, which sells reproductions from museums, outsourced fulfillment and returns to SubmitOrder.com Inc., using return labels that come with every purchase. Says MuseumCompany VP of operations Ned Crosby, "It's important to make sure the customer is credited promptly, and that the goods get back into inventory and are available for sale again quickly" If not, some online retailers may not be around long enough to get the process right next time. -WITH AARON RICADELA, JEFF SWEAT, AND RICK WHITING

Shippers Find That Reverse Logistics Add Up

Shipping companies and the U.S. Postal Service see dollar signs when it comes to reverse logistics-and they're teaming with retailers to make it easier for customers to return items.

United Parcel Service Inc. launched Electronic Returns last year. Customers visit UPS's Web site or the retailer's site to print out bar-coded labels. They can then drop off the returns at any UPS drop point or facility.

Buy.com Inc. is testing the service, which has cut one part of the return cycle time from several days to just a few minutes, says Travis Fagan, Buy.com's VP of customer support. Previously, Buy.com customers had to call and request a return shipping label, which was mailed; now, they can just print one. The service has been handling about two-thirds of Buy.com's holiday returns, says VP of operations Tom Wright, who expects to see holiday returns coming in through February. "If we're not taking [toll-free] calls that cost \$6 or \$8 each and returns are being processed in two or three days, it has to be more efficient," Wright says.

A similar program from Federal Express, FedEx NetReturn, lets consumers print out return labels at home and drop off packages at any FedEx location. About 150 companies use the service.

The U.S. Postal Service offers a similar service, which is used by Returns Online Inc. to handle returns for retailers. The postal service gives Returns Online its own ZIP code to speed delivery times. Customers can return goods to any mailbox or post office using a bar-coded label they print out at Returns Online's Web site. "The more people purchase over the Internet," says Shannon Hauser, Returns Online's chairman and CEO, "the more the problem of returns will come up." --CHERYL ROSEN

...in the demand management arena is that customers are placing more and more responsibility on vendors to ensure product availability through arrangements such as Vendor Managed Inventory programs. In return, customers have agreed to make available point -of-sale or point-of-usage data to vendors, which they could use in their forecasting efforts. Collaborative Planning...

Importance of 'Organic' Products in Major Stores

FRANCE - MONOPRIX LAUNCHES SECOND GREEN PRODUCT CAMPAIGN

French Technology Survey (FTS) 0 August 1991 p5

Language: French

Importance of 'Organic' Products in Major Stores

Monoprix, a store chain, has launched a second 'green' product campaign in its 282 stores following the success of its first such campaign in 1990. The 32 environmentally friendly productsas detergents without phosphates and batteries without mercury, the second campaign is promoting what the products do actually contain. Monoprix stores are offering a total of 24 new green products, including pure and natural body care... ..are involved. Monoprix is also considering the introduction, in June 1991, of a scheme whereby customers can exchange old plastic bags for bags manufactured from natural fibres such as cotton or jute.

Abstract: Considers the development of a special class of dedicated service called Satellite Data Exchange customer premises service. This innovation was implemented by a five-meter earth station providing 56-kbps point-to-point duplex service. Today the general services system is either an FDM, FDMA (Frequency Division Multiplex/Frequency Division...

Claim 1, more specifically:

Consumer returning a merchandise to a chain store
other than the one he initially bought it from.

The Representative queries the store server from a POS terminal
of return store and sends a cancel instruction to the initial
POS terminal and the corrected transaction is stored in the return
POS terminal.
